06 ABOUT MIRL

MIRL

MYELIN INTERVENTION RECOVERY LOOP

MIRL records the behavioral recovery pathway that follows a factual MYELIN intervention. It preserves evidence of SINE exposure, return attempts, verification, relapse and closure.

OBSERVES

SINE intervention -> Response -> Recovery -> Closure

SCIENTIFIC BOUNDARY

Behavioral software evidence only. MIRL does not directly measure attention, dopamine, brain activity, cognition, psychological state or clinical state.

RECORDED EVIDENCE MAY INCLUDE

SINE stage exposure - return attempts - verification - relapse - recovery latency - closure outcome
